CHIMO SERRANO

Restless Traveller

Photography is an illusion of reality with which we create our own world. The photographer distorts reality, gives another perspective and with great power, conveys its appreciation of the real. Serrano wants to create a new look, assess what possessed, debug core and expand his work with momentum. Learn, communicate, transcend, create, move. These abstract worlds with eternal color ranges that approach the conceptualism. Reflections, textures and colors oversized forget their original form and take on a new dimension. Everything and nothing is what it seems.
